

VLRAG – Variability in Loads and Resources Advisory Group

Webinar

11:00 a.m.—12:30 p.m., Thursday, October 21, 2021

The VLRAG is studying the impact of variability in loads and resources on the western interconnection. This study is focusing on additional battery energy storage systems needed to reliably serve the load when load is increased to 1-in-10 and 1-in-20 scenarios simulating a heat wave. The group will discuss the draft report and the status of the power flow and dynamics portion of the study.
