Chifong Thomas

Open Loop

- Extreme Events heighten the risk/likelihood for events to happen and cause open loop conditions
- Communications between RCs, BAs and TOPs is critical during open loop events
- Enhanced situational awareness (RCs, TOPs & BAs)
- Detailed System overview displays to allow the RCs to monitor system conditions
- Include Open-loop studies in seasonal operation studies
- Be prepared to operate in open loop for extended periods of time
- Identify areas and risks where possible open loop conditions can occur
- RCs, TOPs & BAs develop/update open loop procedures routinely
- Include open loop exercises in annual RC Restoration Drills
