May 14, 2025 | 3:00 – 4:00 p.m. (Eastern)

NERC invites you to attend a live webinar on the 2025 Summer Reliability Assessment (SRA) – NERC’s 2025 SRA is planned for release during the week of May 12. In the assessment, NERC finds that system operators in many parts of North America face challenges this summer with meeting peak electricity demand. New resource additions—primarily solar and some batteries—are helping to meet surging load growth. Yet reserve shortages can occur during a range of conditions that include above-normal electricity demand, periods of low wind and solar output, and wide-area heat events that disrupt available transfers and generator availability. The assessment includes recommendations that industry and policy makers should consider implementing prior to the start of summer.

NERC staff and leaders from the Reliability Assessment Subcommittee will lead a discussion and answer your questions concerning the 2025 SRA. This webinar is public and focused on the bulk power system owners and operators.
