The group's first milestone was to outline the characteristics and risks related to these emerging large loads in a white paper titled "Characteristics and Risks of Emerging Large Loads." The draft was revised with input from over 400 comments and a comment review team. The LLTF will vote on the white paper for approval at this meeting.

After the task force regular activities, the workshop will begin. These workshops will help prioritize and enhance clarity on possible mitigations. The findings of these workshops will help inform the LLTF Reliability Guideline, which is focused on identifying mitigations for the risks posed to the Bulk Power System by emerging large loads.

The LLTF will host a virtual meeting and workshop via MS Teams on June 18, 2025. The agenda for the meeting is available on the [LLTF Website](#).
