

## Software Partnership Announcement

October 15, 2025

We are excited to announce a partnership between WECC and [Atomic Object](#) to develop a greenfield enterprise software platform for the Western Renewable Energy Generation Information System (WREGIS). This project will create a custom software solution designed specifically for program participants in the Western United States and Canada. The software will provide a secure, scalable, and user-friendly solution that supports both compliance and voluntary renewable energy certificate (REC) markets across the West.

Atomic Object is a custom software consultancy with more than 20 years of experience helping organizations launch new products, enhance existing ones, and modernize legacy systems. Atomic Object offers a uniquely integrated approach which brings together strategy, design, development, and delivery expertise – all under one roof. This full-product team model enables them to develop products that exceed user expectations and achieve business goals.

“Atomic Object was selected from more than a dozen RFP respondents based on their qualifications, energy sector experience, team approach, and commitment to a modernized and innovative user experience,” says Melanie Frye, WECC’s president and CEO.

Atomic Object Managing Partner Jordan Schaezle says his team is eager to begin work on the new platform.

“We’re partnering with WECC to rethink the critical workflows that thousands of WREGIS users rely on to track renewable energy generation and compliance,” he said. “As demand for clean energy grows, the systems that support renewable markets must evolve to keep pace. We look forward to applying our expertise in user experience design, system architecture, and product delivery to this important mission,” said Schaezle.

Read about some of the more than 300 products Atomic Object has built for entities ranging from startups to Fortune 500 companies [here](#).

We look forward to working together to create an exceptional software platform that will meet stakeholder needs and support WREGIS into the future.
