Training and Outreach
Specialist

Antitrust Policy

- All WECC meetings are conducted in accordance with the WECC Antitrust Policy and the NERC Antitrust Compliance Guidelines
- All participants must comply with the policy and guidelines
- This meeting is public—confidential or proprietary information should not be discussed in open session

Antitrust Policy

- This webinar is being recorded and will be posted publicly
- By participating, you give your consent for your name, voice, image, and likeness to be included in that recording
- WECC strives to ensure the information presented today is accurate and reflects the views of WECC
- However, all interpretations and positions are subject to change
- If you have any questions, please contact WECC's legal counsel

ITCS Overview

January 31, 2024

Vic Howell

Director, Reliability
Assessments and Modeling

Interregional Transfer Capability Study

- Interregional Transfer Capability Study = ITCS
- What is Transfer Capability?

Total transfer capability: the amount of electric power that can be moved or transferred reliably from one area to another area of the interconnected transmission systems by way of all transmission lines (or paths) between those areas under specified system conditions, or such definition as contained in Commission-approved Reliability Standards.

ITCS Project Overview

Fiscal Responsibility Act of 2023, Section 322

Congress directed that, in consultation with the Regional Entities and transmitting utilities, NERC shall conduct a study containing three elements:

- **Phase 1 Objective:** Determine the total transfer capability between neighboring transmission planning regions.
- **Phase 2 Objective:** Identify “prudent” additional transfer capability between neighboring areas to resolve reliability issues in the future.
- **Phase 3 Objective:** Identify mechanisms to achieve and sustain the identified transfer capability and any recommended enhancements.

What the Study is NOT

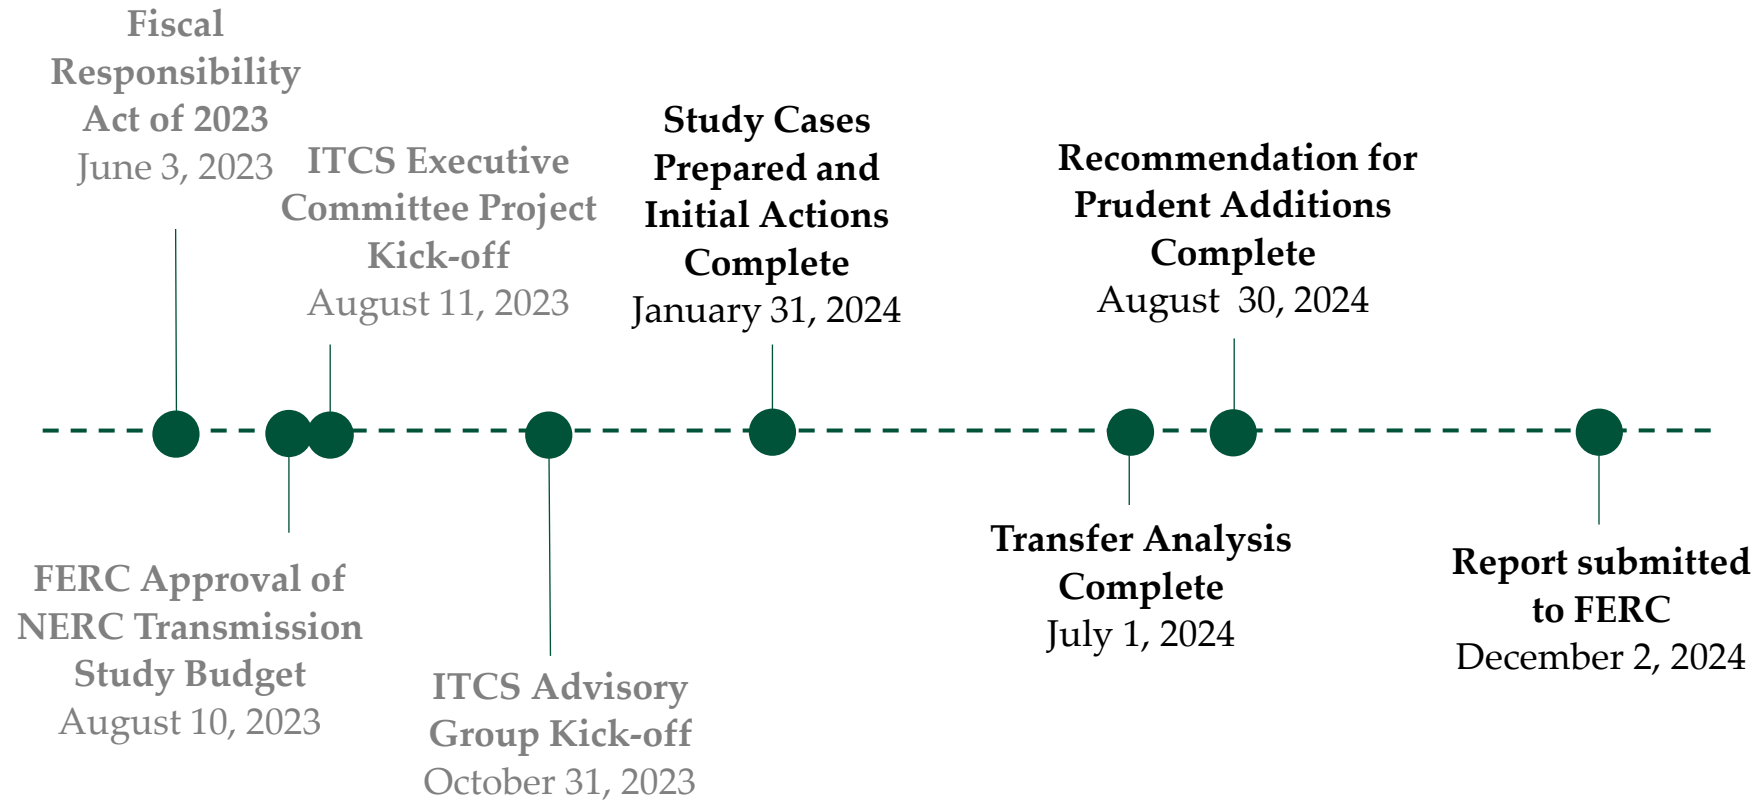

- Planning study
- Replacement for Transmission Expansion Analysis and Interregional Planning groups
- No recommendations for specific projects (generation, transmission, etc.)
- Will focus on WHAT...not HOW
- A complete or final solution

Entities Involved

- NERC and the six Regional Entities in consultation with transmitting utilities
- NERC Advisory Group
- WECC Advisory Group
- Contractors—PowerGEM and Telos Energy

ITCS Timeline Overview

WECC ITCS Phase 1 and Data Request

January 31, 2024

Doug Tucker
Senior Engineer

Phase 1: Method

- Calculate current transfer capability (in years 2024 and 2033)
 - Create run-of-the-mill base cases (summer peak, winter peak, etc.)
 - Identify source/sink combinations
 - Identify contingencies
 - Identify RAS schemes to be modeled
 - Develop assumptions that represent extreme/maximum transfer conditions
 - Identify stability limitations (if any)
 - Represent and simulate the extreme/maximum transfer conditions in the cases created in Step 1.a and calculate transfer capability for each of the source/sink combination (bidirectional)

Phases 1: Cases and Contingencies

- Study four cases from the West
 - 2024 Heavy Summer
 - 2023/2024 Heavy Winter
 - 2033 Heavy Summer
 - 2033/2034 Heavy Winter
- Apply adverse system conditions (contingencies) to each case
- Data request sent and responses received
 - Sent November 2023, responses due January 17, 2024

Phase 1: Next Steps

- Provide updated cases to NERC
- Work with PowerGem to find the max transfer capability between the source/sink combinations
- If issues arise, work with stakeholders to mitigate

ITCS Phase 2

January 31, 2024

Matthew Elkins
Principal Analyst

Phase 2: Energy Assessment

- Perform Energy Assessment (in years 2024 and 2033)
 - Identify system conditions under which system will experience energy shortfalls,
 - Determine prudent additions to interregional transfer capability between each pair of transmission planning region,
 - Evaluate which planning area(s) are prudent to add increased transfer capability

Phase 2: Not in Scope

- Probabilistic North America resource adequacy analysis
 - Instead, developing a screening tool for challenging periods and creating assumptions to redispatch transmission planning cases based on representative weather conditions
- Comparisons of interregional transfer capability against local generation additions for reliability

Phase 2: Next Steps

- Perform Energy Assessment (in years 2024 and 2033)
 - Develop a consistent North American dataset
 - U.S. data collected
 - Sending data request to Canadian provinces asking for historical hourly generation by resource type
 - Identify periods of tight supply conditions
 - Develop metrics and methods
 - Re-dispatch transmission planning cases

NERC ITCS Advisory Group Update

January 31, 2024

Katie Rogers
Manager, Reliability
Assessments

January 25 NERC Advisory Group Meeting

- Project and timeline overview and actions completed
- Phase 1 and Phase 2 review, technical discussions
- Transmitting utility engagement
- Discussion—What does success look like to you? What does it NOT look like?
- Next steps and advisory group meeting schedule
 - Monthly advisory group virtual meetings
 - In-person meeting in October

NERC AG Success Poll Results

What does success look like:

- Actionable
- Repeatable
- Increased communication and coordination
- Alignment
- Clear

What is NOT success:

- Put on the shelf
- Continued disconnect
- Not actionable
- Deeply technical

ITCS Updates

ITCS Status Update

[January 31, 2024, 2:00–3:00 p.m.](#)

The virtual status update on the Interregional Transfer Capability Study (ITCS) will include a high-level overview, share updates from NERC's ITCS Advisory Group meeting, follow up on WECC's ITCS Data Request, review Phases One and Two, provide resources, and answer stakeholder questions.

.....

You can follow the ITCS process on our [webpage](#).

 - Webinars
- Main Content Area:**
 - Breadcrumbs: Home > Program Areas & Departments > Event Analysis, Reliability Assessment, and Performance Analysis > Interregional Transfer Capability Study (ITCS)
 - Section: Interregional Transfer Capability Study (ITCS)
 - Text: A strong, flexible transmission system that is capable of coping with a wide variety of system conditions is key for the reliable supply and delivery of electricity. NERC has a long history of highlighting the need for more infrastructure, including transmission and pipelines, in its reliability assessments as the independent voice for reliability.
 - Text: NERC is conducting the Interregional Transfer Capability Study that will analyze the amount of power that can be moved or transferred reliably from one area to another area of the interconnected transmission systems. The study will be conducted in consultation with the six Regional Entities and each transmitting utility in neighboring transmission planning regions.
 - Text: Transfer capability is a critical measure of the ability to address energy deficiencies by relying on distant resources and is a key component of a reliable and resilient bulk power system. Recent and continuing resource mix changes require greater access and deliverability of resources to maintain reliability—particularly during extreme weather and environmental conditions.
 - Text: The study, which was directed in the Fiscal Responsibility Act of 2023, must be filed with the Federal Energy Regulatory Commission by **December 2, 2024**. A public comment period will take place when FERC publishes the study in the Federal Register. After submittal, FERC must provide a report to Congress within 12 months of closure of the public comment period with recommendations (if any) for statutory changes.
 - Text: For any questions please contact the ITCS Project Team.
