2026 Base Case Compilation Schedule

System Review Subcommittee (SRS)
Approved June 12, 2025

Introduction

The System Review Subcommittee (SRS) compiles steady-state and dynamic base cases to meet WECC's requirements to compile interconnection-wide base cases. The 2026 Base Case Compilation Schedule provides descriptions of and a schedule for base cases to be compiled during the 2025–26 calendar year.

Objectives

1. Provide a detailed schedule to appropriate stakeholders to identify necessary data submissions and data review milestones to compile base cases.
2. Identify base cases to be compiled. A typical annual base case compilation schedule includes:
   a. Five operating cases;
   b. Two specialized cases;
   c. One five-year summer planning case;
   d. One five-year winter planning case;
   e. One 10-year summer planning case; and
   f. One 10-year winter planning case.

Supporting Information

Promptly submitting steady-state and dynamics data is necessary to maintain the 2026 Base Case Compilation Schedule. If steady-state and dynamic data is submitted late, the SRS will follow the Late Data Procedure provided in WECC's Data Preparation Manual (DPM).

Typical base cases are meant to model anticipated load level but may model slightly heavier or slightly lighter than anticipated load levels to get desired stressed transfer levels on designated paths. Base cases usually include operating cases, five-year cases, 10-year cases, and other cases as requested by the Reliability Assessment Committee (RAC). Specialized base cases aim to represent critical operating conditions like severe weather events, equipment out of service (transmission lines, reactive devices, or static Var compensators), unusual generation patterns due to forced outages, or insecure voltage conditions. Some cases may represent extreme load conditions (up to 105% of forecast peak) in a sub-region. Data submitters should not be reluctant to model a condition due to lack of historical record of the specialized case actually occurring.

The 2026 Base Case Compilation Schedule includes the following base cases:

- Operating base cases
  - 2026–27 Heavy Winter
  - 2026–27 Light Winter
  - 2027 Heavy Spring
  - 2027 Heavy Summer
  - 2027 Light Summer
- Five-year base cases
  - 2031–32 Heavy Winter
  - 2032 Heavy Summer
- 10-year base cases
  - 2036-37 Heavy Winter
  - 2037 Heavy Summer
- Specialized base cases
  - 2027 Light Autumn
  - 2046 Heavy Summer

Generation and load levels in the base case description sheets refer to the season being studied. For example, if a case description sheet for a winter base case calls for high hydro in a specific area, this means high levels of hydro generation for a winter condition. In some areas, a high level of hydro generation in the winter may be less than median hydro generation levels in the spring or summer. Also, light loads may be increased in the importing areas or heavy loads may be decreased in exporting areas to represent the desired interchange schedules. Renewable generation, when specified, should be based on each entity's Renewable Portfolio Standard. Specific information on the desired load levels is in the base case description sheets and should be used as a guide in preparing cases. All loads are coincident unless indicated otherwise. Specified time supersedes specified percentage of load.

Interchange Schedules in the base case description sheets refer to the target flows that should be reached to represent anticipated flow levels and direction for the season being studied. Targets may be changed as anticipated operating conditions become clearer. Where no target flows are specified, actual scheduled transfers should be based on each area's load and generation balance (deficiency/surplus) and economical generation dispatch. Keep the purpose of the case in mind and coordinate schedules between areas before data submission.

Only corrections to the Master Dynamics File or new data for it need to be submitted for each case build.

During the process of compiling each base case, WECC staff and the functional entities participating in the process should follow the data requirements and procedures outlined in the WECC DPM.

Following the documented requirements and procedures will help develop base cases with compatible steady-state and dynamic data, ensure that the interconnection-wide model is adequate, and continually improve the accuracy of the data submitted.

* 2025 Case Schedule

CASE DESCRIPTION	2027 LIGHT AUTUMN—27LA1S

CASE DUE DATES: To Area Coordinator: October 3, 2025

To WECC Staff: October 24, 2025

PURPOSE: *Specialized Case*—Prepare a fall case with low spinning reserves / system inertia in the British Columbia, Northwest, and Northern California areas (few units online) with light interarea transfers, except for moderate-to-heavy interarea transfers from California to Northwest to study the year 2027. Light transfers on transmission paths could produce higher voltages in these areas. The case proposal was based upon a similar system scenario that occurred on 9/24/2023 at 1200 MDT.

ITEMS TO BE PREPARED:	From Case	2026 HS3-OP
	Stability Data	Master Dynamics File
	Significant Changes	From Existing System
LOADS:	Light; minimum daytime loads for Autumn.	
TIME:	1100–1300 hours MDT	
RATINGS:	As appropriate for temperatures associated with the conditions modeled.	

GENERATION:	HYDRO	THERMAL	RENEWABLE
Canada	Light	--	--
Northwest	Light	--	--
Idaho/Montana	--	--	--
Utah/Colorado/Wyoming	--	--	--
Northern California Hydro	Light	--	--

CASE DESCRIPTION	2046 HEAVY SUMMER—46HS1S

CASE DUE DATES: To Area Coordinator: June 5, 2026

To WECC Staff: July 10, 2026

PURPOSE: *Specialized Case*—Develop a heavy summer base case power flow only that represents 2046, consistent with the LTPTF Recommendation. This case will require internal coordination between the transmission planners that typically develop base cases and the resource planners that develop Year 20 forecasts for generation and demand. This case must include the same generation and demand provided through the 2026 Loads and Resources data submit that includes a Year 20 forecast. This case will serve as one of the starting cases for the studies required under FERC order 1920.

ITEMS TO BE PREPARED:	From Case	2036 HS1
	Stability Data	None needed
	Significant Changes	From Existing System with in-service dates
LOADS:	100% summer peak 1-in-2 years load in 2046.	
TIME:	Forecasted Peak Hour for data submitter area.	
RATINGS:	As appropriate for temperatures associated with the conditions modeled.	
GENERATION:	Consistent with the 20-year generation forecast developed by your entity's resource planners.
